

August/Sept. 2014 Newsletter

ISSA Rochester News

Chapter of ISSA International
www.rocissa.org

Past Events:

Over the past several months we have had several great events. These events included a very insightful discussion by Leo Barella, a great networking event at Mulconry's Irish Pub in Fairport, and a high level view of how all of an organization's security silos can work together by Tiger Team member Jose Bravo. Special thanks to Sean Henry from Invincea for sponsoring the networking event at Mulconry's, and IBM's Mark Zane for sponsoring our chapter meeting this past August.

We want to thank all those who attended, there was great food and discussion along with some great speakers! If you haven't been to one of our events in awhile please keep an eye out at rocissa.org or sign up for our mailing list to stay informed.

Upcoming Events:

Chapter Meeting

Due to the upcoming Rochester Security Summit, we will be postponing our monthly Chapter Meetings until November.

If you have an idea for a meeting, or any suggestions or comments on past meetings for events please let us know at membership@rocissa.org.

Communications:

Have an article you really enjoyed or are you writing an article you really want to share with everyone? Send it to info@rocissa.org and we can put it in the newsletter!

Have a question you really need help with? Join us on LinkedIn and start a discussion in the **Rochester Chapter Information Systems Security Association** group.

Rochester ISSA is now on twitter. Check us out at @RocISSA and stay up on the latest infosec news.

Need CPEs?

- Attend an ISSA chapter meeting
- Speak at RSS or a chapter meeting
- Volunteer for a committee
- Write a journal article

Rochester Security Summit 2014

**Tuesday October 7th and Wednesday
October 8th**

Hyatt Regency Rochester

www.rochestersecurity.org

Register now at our website or EventBrite
(<http://bit.ly/1pRq4cm>)!

Summit News

The event is coming up quickly!

We are on pace to sell out both attendees and sponsors so register early!

In-Depth Training

These sessions require a separate (free) registration, so make sure to sign up early, as they are sure to go quick!

Each will occur once per day, see the link below for more details on each training session!

<https://www.rochestersecurity.org/schedule/in-depth-training/>

This Year's Training Sessions:

- Hands-on Threat Detection and Analysis with Dennis Allen
- Software Security Training with Jim Manico

Call for Volunteers

We need your help to make RSS a success! Volunteer today and you get a free ticket to this year's Summit!

Email info@rochestersecurity.org to volunteer today!

Locals Making News!

Paul Robinson's article in the IBM Security blog:

Virtually Simple: A Guide to Simplifying Cyber Security

One of my favorite modern-day public figures is Sir Richard Branson (I know this is a cyber security site, but stay with me). This is a man who has made an insane amount of money, achieved global fame and done amazing acts of charity. Recently, I read an article of his and was struck by a sentence, which I will paraphrase: "Any idiot can make something complicated, but it takes a genius to simplify something." I was moved by this, especially since it came from someone as successful as Branson. The common theme I get from what he said is that the more complex we make something look or seem, the more it is falsely perceived as brilliant. This is very common, especially in the world of cyber security.
